| SECTION 3: COMPOSIT                                   | ION/INFORMATION ON INGREDIENTS   |   |                                      |  |  |  |  |
|---|--|---|--------------------------------------|--|--|--|--|
| CHEMICAL NAME   |  | CAS NUMBER  | % WEIGHT                             |  |  |  |  |
| Methyloxirane polymer                                 | 157937-75-2  | 30-60   |                                      |  |  |  |  |
| 4,4'-Diphenylmethane diisocya                         | 101-68-8   | 13-30   |                                      |  |  |  |  |
| 2,4'-Diphenylmethane diisocya                         | 5873-54-1  | 13-30   |                                      |  |  |  |  |
| Propylene carbonate                                   |  | 108-32-7  | 7-13                                 |  |  |  |  |
| SECTION 4: FIRST AID MEASURES                         |  |   |                                      |  |  |  |  |
| EYE:  | In case of eye contact, remove contact lens and rinse immediately with plenty of minutes. Protect unharmed eye. Keep eye wide open while rinsing. If eye irritat   | of water, also under the en<br>ion persists, consult a spe  | velids, for at least 15<br>ecialist. |  |  |  |  |
| SKIN:   | immediately. Wash contaminated clothing before reuse. Thoroughly clean sho   | In case of contact, immediately flush skin with soap and plenty of water. Take off contaminated clothing and shoes immediately. Wash contaminated clothing before reuse. Thoroughly clean shoes before reuse. Call a physician if irritation develops or persists. An MDI study has demonstrated that a polyglycol-based skin cleanser (such as D-TamTM, PEG-400) |                                      |  |  |  |  |
| INHALATION:   | If breathed in, move person into fresh air. Call a physician or poison co<br>warm and at rest. Keep respiratory tract clear. If breathing is difficult, g<br>stopped, administer artificial respiration. If unconscious place in recov<br>Consult a physician immediately if symptoms such as shortness of bre   | ive oxygen. If breathin<br>ery position and seek  | g is irregular or medical advice.    |  |  |  |  |
| INGESTION:  | Gently wipe or rinse the inside of the mouth with water. DO NOT induce vomiti poison control center. Keep respiratory tract clear. Keep at rest. Do not give mill when lying on his back, place him in the recovery position. Never give anything symptoms persist, call a physician. Take victim immediately to hospital.   | k or alcoholic beverages.   | If a person vomits                   |  |  |  |  |
| NOTES TO PHYSICIAN:                                   | Symptomatic and supportive therapy as needed. Following severe ex monitored for 48 hours.  | posure, medical follow  | v-up should be                       |  |  |  |  |
| SECTION 5: FIRE FIGHT                                 | ING MEASURES   |   |                                      |  |  |  |  |
| FLASH POINT:  | >230°F (>110°C) Method: Closed cup.  |   |                                      |  |  |  |  |
| HAZARDS WHEN ON FIRE<br>OR NEAR FLAME:                | Closed container may forcibly rupture under extreme heat or when contents are contaminated with water $(CO_2$ formed).   |   |                                      |  |  |  |  |
| SUITABLE EXTINGUISHING<br>MEDIA:                      | Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.<br>Foam, carbon dioxide, or dry powder.  |   |                                      |  |  |  |  |
| UNSUITABLE<br>EXTINGUISHING MEDIA:                    | High volume water jet.   |   |                                      |  |  |  |  |
| SPECIAL EXPOSURE<br>HAZARDS:                          | Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. If in a fire or heated, a pressure increase will occur and the container may rupture.  |   |                                      |  |  |  |  |
| SPECIAL PROTECTIVE<br>EQUIPMENT FOR FIRE<br>FIGHTERS: | Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode. PVC boots, gloves, safety helmet, and protective clothing should be worn.  |   |                                      |  |  |  |  |
| SECTION 6: ACCIDENTA                                  | AL RELEASE MEASURES  |   |                                      |  |  |  |  |
| ACCIDENTAL RELEASE<br>MEASURES:                       | For major spills call <b>CHEMTREC</b> : Toll free <b>1-800-424-9300</b> for interna  | tional call <b>1-703-527-3</b>  | <b>887</b> .                         |  |  |  |  |
| PERSONAL PRECAUTIONS:                                 | Wear appropriate personal protective equipment recommended in SECTION 8: EXPOSURE CONTROL/<br>PERSONAL PROTECTION of this SDS. Immediately contact emergency personnel. Evacuate the area. Keep<br>upwind avoiding inhalation of vapors. Clean-up should only be performed by trained personnel. People<br>dealing with major spillages should wear full protective clothing including respiratory protection.   |   |                                      |  |  |  |  |
| ENVIRONMENTAL<br>PRECAUTIONS:                         | This material may contaminate the environment without proper control and response to spills. Ensure spilled material does not come in contact with soil, waterway, drains, sewers, or other runoff that would further disperse the material. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil, or air). Sources of ignition should be kept clear.  |   |                                      |  |  |  |  |
| METHODS FOR<br>CONTAINMENT:                           | Use diking or capping to control migration. Contain and absorb large spillages with a non-flammable absorbent carrier (such as vermiculite, earth, or sand). DO NOT USE combustible materials such as sawdust. Shovel into open-top drums or plastic bags for further decontamination, if necessary. Remove and properly dispose of residues. Dispose of via a licensed waste disposal contractor (See SECTION 13: DISPOSAL CONSIDERATIONS) Notify applicable government authorities if release is reportable.   |   |                                      |  |  |  |  |
| METHODS FOR CLEANING<br>UP:                           | Only proceed with clean up by taking the appropriate personal protection measures required and ensure surrounding area does not contain further hazards that could worsen the spill, cause migration, or cause further harm (i.e. eliminate any ignition sources). Move any non-contaminated, non-leaking containers from the spill zone if it can be done safely. Dike, dam, or further restrict and stop active leaks without posing further damage or harm to individuals, the environment, and/or structures. Contain and collect spillage. See SECTION 13: DISPOSAL CONSIDERATIONS for disposal information and SECTION 8: EXPOSURE CONTROL/ PERSONAL PROTECTION for recommended Personal Protective Equipment (PPE). Obey all local, state, and federal regulations during clean up. |   |                                      |  |  |  |  |

| SECTION 7: HANDLING                              | & STORAGE  |  |  |
|--|--|--|--|
| GENERAL:   | Ideal storage temperature is 60-90°F (15-32°C). Handling and storage shall be in accordance with local, state/provincial, or federal regulations.  |  |  |
| HANDLING:  | Before opening this package, read and follow warning labels on all components. Avoid contact with the product or reaction mixture. Put on appropriate personal protective equipment. Use only with adequate ventilation to ensure that the occupational exposure limit is not exceeded, use respirator when ventilation is inadequate. Avoid breathing aerosols, mists, and vapors. (See SECTION 8: EXPOSURE CONTROL/ PERSONAL PROTECTION for details). Do not ingest. Eating, drinking, and smoking shall be prohibited in areas where this material is handled, stored, and processed. Workers shall wash hands and face before eating, drinking, and smoking. Persons with a history of skin sensitization problems, asthma, allergies, or chronic or recurrent respiratory disease should not be employed in any process in which this product is used. Do not get in eyes, on skin, or clothing. Keep in the original container or an approved alternative made from a compatible material. Keep tightly closed when not in use. Empty containers retain product residue and can be hazardous. Do not reuse containers. |  |  |
| STORAGE:   | Keep container tightly closed and properly sealed when stored. Keep contents away from moisture. Due to reaction with water producing CO <sub>2</sub> gas, a hazardous build-up of pressure could result if contaminated containers are resealed. DO NOT reseal contaminated containers. Uncontaminated containers, free of moisture, may be resealed and stored after purging the container with argon or nitrogen gas.   |  |  |
| SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION |  |  |  |

## EXPOSURE LIMITS:

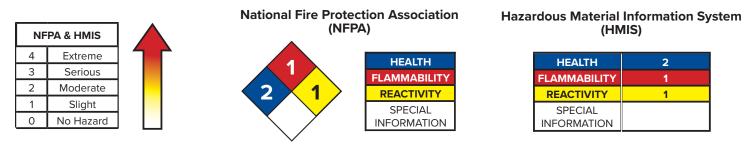

| COMPONENT NAME                         | CAS NUMBER EXPOSURE LIMITS  |   |  |  |
|--|---|---|--|--|
| Methyloxirane polymer                  | 157937-75-2   | Not available   |  |  |
| 4,4'-Diphenylmethane<br>diisocyanate   | 101-68-8  | ACGIH TLV<br>TWA: 0.005 ppm 8 hour(s)<br>OSHA PEL<br>CEIL: 0.02 ppm<br>CEIL: 0.2 mg/m <sup>3</sup><br>NIOSH REL<br>CEIL: 0.2 mg/m <sup>3</sup> 10 minute(s)<br>CEIL: 0.02 ppm 10 minute(s)<br>TWA: 0.05 mg/m <sup>3</sup> 10 hour(s)<br>TWA: 0.005 ppm 10 hour(s)   |  |  |
| 2,4'-Diphenylmethane diisocyanate      | 5873-54-1   | Not available   |  |  |
| Propylene carbonate                    | 108-32-7  | Not available   |  |  |
| ENGINEERING CONTROLS:                  | Use only with adequate ventilation. If user operations generate dust, fumes, gas, vapor, or mist, use p enclosures, local exhaust ventilation, and other engineering controls to keep worker exposure to airbo contaminants below any recommended or statutory limits.  |   |  |  |
| HYGIENE MEASURES:                      | before eating, smoking, and usi<br>administrative, and other best p<br>clothing and to prevent uninten<br>material appropriately and in co  | e thoroughly with plenty of soap and water after handling chemical products,<br>ng the restroom and at the end of the working period. Appropriate engineering,<br>ractice decontamination control measures must be used to isolate contaminates on<br>ded migration of contaminants. Handle clothing and other potentially contaminated<br>mpliance with local, state, and federal regulations in the process of removing,<br>these potentially contaminated materials. Ensure compliant use and location of<br>wers. |  |  |
| PERSONAL PROTECTIVE EQU                | IPMENT (PPE):   |   |  |  |
| EYE PROTECTION:                        | to avoid exposure to liquid splash  | n approved standard should be used when a risk assessment indicates this is necessary<br>les, mists, or dusts. If contact is possible, the following protection should be worn, unless<br>r degree of protection: chemical splash goggles and/or face shield.   |  |  |
| SKIN PROTECTION:                       | Personal protective equipment for the body should be selected based on the task being performed, the risks involved, and should be approved by an industrial hygiene specialist before handling this product.   |   |  |  |
| HANDS PROTECTION:                      | Chemical resistant gloves complying with applicable health and safety standards shall be worn when handling this product.<br>Protective gloves are those made from butyl rubber, nitrile rubber, or polyvinyl alcohol. Appropriate hazard assessments<br>in conjunction with an evaluation of the protection factors of chemical resistant gloves shall be performed to ensure the<br>protective properties remain intact. It is noted that the time it takes to breakdown of protection factors for different glove<br>manufacturers varies. In the case of mixtures, the protection factors of chemical resistant gloves may be impacted and<br>deteriorate at unpredictable rates without understanding the impact of the substance and the specific protection factors of the<br>chemical resistant gloves. |   |  |  |
| RESPIRATORY PROTECTION:                | Ensure adequate ventilation. If the respirator is the sole means of protection, use a full-face supplied respirator. Use respirators and components tested and approved under appropriate government standards such as OSHA 29CFR 1910.134, NIOSH (US), or CEN (EU).  |   |  |  |
| ENVIRONMENTAL<br>EXPOSURE<br>CONTROLS: | Dispose of raw and spent materials and wastes in compliance with all local, state, and federal regulations to prevent potential environmental contamination. Industrial air monitoring may be required to determine any potential environmental hazards to the atmosphere. This monitoring may result in the use of engineering and administrative controls such as filtering and scrubbing systems to mitigate or eliminate potential contaminants.  |   |  |  |

| SECTION 9: PHYSICAL &  | CHEMICAL PROPE  | RTIES                         |                                 |                                  |  |  |

| SECTION 10: STABILITY &  |   |                               |                                 |                                  |  |  |
| STABILITY:   | Stable when handled   | and stored at temperatu       | res 60-90°F (15-32°C).          |                                  |  |  |
| INCOMPATIBILITY:   | Incompatible with wat   | er, alcohols, amines, bas     | es, and acids.                  |                                  |  |  |
| HAZARDOUS REACTION:  | Exothermic reaction will occur when combined with sister component. Under normal conditions of storage and use, hazardous reactions will not occur. Reaction with water (moisture) produces CO <sub>2</sub> gas. An exothermic reaction with materials containing active hydrogen groups can occur. The reaction becomes progressively more vigorous and can be violent at higher temperatures if the miscibility of the reaction partners is good or is supported by stirring or by the presence of solvents. This material is insoluble with and heavier than water. It sinks to the bottom, but reacts slowly at the interface. A solid water insoluble layer of polyurea is formed at the interface by liberating carbon dioxide.   |                               |                                 |                                  |  |  |
| HAZARDOUS<br>POLYMERIZATION:   | Polymerization may occur at elevated temperatures in the presence of alkalis, tertiary amines and metal compounds. Under normal conditions of storage and use, hazardous polymerization should not occur.   |                               |                                 |                                  |  |  |
| CONDITIONS TO AVOID:   | Avoid moisture contamination and high temperatures.   |                               |                                 |                                  |  |  |
| HAZARDOUS DECOMPOSITION:   | May produce toxic fumes of carbon dioxide, carbon monoxide, and/or nitrogen oxides when near heat source/flame.   |                               |                                 |                                  |  |  |
| SECTION 11: TOXICOLOG  | Y INFORMATION   |                               |                                 |                                  |  |  |
| ACUTE HEALTH EFFECTS:  |   |                               |                                 |                                  |  |  |
| EYE CONTACT:   | Causes eye irritation with symptoms of reddening, tearing, stinging, and swelling. May cause temporary corneal injury. Vapor or aerosol may cause irritation with symptoms of burning and tearing.  |                               |                                 |                                  |  |  |
| SKIN CONTACT:  | Causes skin irritation with symptoms of reddening, itching, and swelling. Persons previously sensitized can experience allergic skin reaction with symptoms of reddening, itching, swelling, and rash. Cured material is difficult to remove. Contact with MDI can cause discoloration.   |                               |                                 |                                  |  |  |
| INHALATION:  | Disocyanate vapors or mist at concentrations above the TLV or PEL can irritate (burning sensation) the mucous membranes in the respiratory tract (nose, throat, lungs) causing runny nose, sore throat, coughing, chest discomfort, shortness of breath and reduced lung function (breathing obstruction). Persons with a preexisting, nonspecific bronchial hyperreactivity can respond to concentrations below the TLV or PEL with similar symptoms as well as asthma attack or asthma-like symptoms. Exposure well above the TLV or PEL may lead to bronchitis, bronchial spasm and pulmonary edema (fluid in lungs). Chemical or hypersensitivity pneumonitis, with flu-like symptoms (e.g., fever, chills), has also been reported. These symptoms can be delayed up to several hours after exposure. These effects are usually reversible. The test atmosphere generated in the animal study is not representative of workplace environments, how the substance is placed on the market, and how it can reasonably be expected to be used. Therefore the test result cannot be directly applied for the purpose of assessing hazard. Based on expert judgment and the weight of the evidence, a modified classification for acute inhalation toxicity is justified. |                               |                                 |                                  |  |  |
| NGESTION: May cause irritation of the digestive tract. Symptoms may include abdominal pain, nausea, vomiting, and diarrhea |   |                               |                                 |                                  |  |  |
| ACUTE TOXICITY:  |   |                               |                                 |                                  |  |  |

| POTENTIAL CHRONIC EFFECTS:                            |  |                                      |                         |                                   |  |  |  |
|---|--|--------------------------------------|-------------------------|-----------------------------------|--|--|--|
| CHRONIC EFFECTS:                                      | As a result of previous repeated overexposures or a single large dose, certain individuals may develop sensitization to isocyanates (asthma or asthma-like symptoms) that may cause them to react to a later exposure to isocyanates at levels well below the TLV or PEL. These symptoms, which can include chest tightness, wheezing, cough, shortness of breath or asthmatic attack, could be immediate or delayed up to several hours after exposure. Extreme asthmatic reactions can be life threatening. Similar to many non-specific asthmatic responses, there are reports that once sensitized an individual can experience these symptoms upon exposure to dust, cold air, or other irritants. This increased lung sensitivity can persist for weeks and in severe cases for several years. Sensitization can be permanent. Chronic overexposure to isocyanates has also been reported to cause lung damage (including fibrosis, decrease in lung function) that may be permanent. Prolonged contact with skin can cause reddening, swelling, rash, and, in some cases, skin sensitization. Animal tests and other research indicate that skin contact with MDI can play a role in causing isocyanates. Prolonged vapor contact with the eyes may cause conjunctivitis. |                                      |                         |                                   |  |  |  |
